

Problem of the Day: Solve the equation.

$$-4x + 2 = -6x - 4$$

$$\begin{array}{l} +6x \quad | \quad +6x \\ 2x + 2 = -4 \end{array}$$

$$2x = -6$$

$$\underline{2x = -6}$$

$$\underline{x = -3}$$

Plan for the Day: Daily integer quiz update

Go over last week's homework

Finish circuit on solving equations with variables on both sides

TEST THURSDAY!

Objective: We will be able to solve equations with variables on both sides.

Happy belated Birthday to Haylee Mills and Leo Barajas!!

1.  $38.5 \text{ m}^2$
2.  $192 \text{ in}^3$
3.  $70$
4.  $48^\circ$
5.  $75\%$
6.  $\frac{3^{-3}}{9:3} = \frac{1}{3}$

$$7. 42$$

$$8. 20$$

$$9.$$

$$10. 1$$
