

Problem of the Day: Solve the equation.

$$-3(1 - 7n) = (-3 - 8n + 1) + n$$

$$-3 + 21n = 24n - 3 + n$$

$$\text{Plan for the Day: } -3 + 21n = 25n - 3$$

More practice with solving equations with variables on both sides including distributive property

Homework Week 1 is due tomorrow!! $-3 = 4n - 3$

Objective: We will be able to solve equations with variables on both sides including distributive property. $9 = 4n$

Today is National Power Rangers Day!! $0 = n$
