

Problem of the Day: Solve the equation.

$$-8n - 8n = -6(7 + 5n) - 7(-2n + 5)$$

$$-16n = -42 - 30n + 14n - 35$$

Plan for the Day: $-16n = -16n - 77$

Go over last week's homework

Finish circuit and work on Choose My Grade wksht

TEST THURSDAY!

Objective: We will be able to solve equations with variables on both sides with distributive property.

Happy belated Birthday to McKenna Fraley!!

1. 10
2. -4
3. $x = -11$
4. $x = -4$
5. $x = 8$
6. $x = 24$
7. $x = -4$
8. $x = -4$
9. $x = -32$

$$10. -x = 17$$

$$-1x = 17$$

$$\frac{-1x}{-1} = \frac{17}{-1}$$

$$x = -17$$

$$11. -\frac{1}{8}$$

$$12. 1\frac{1}{5}$$

$$13. 70$$

$$14.$$
