

Problem of the Day: Solve the equation.

$$4h + 8(3h - 4) = 7(7h + 2) + 2h$$

Plan for the Day: Pass out Homework Week 3

Finish test on solving equations

Work on extra credit logic puzzle (due Monday) and/or Homework Week 3 after test

Objective: We will be able to solve equations with variables on both sides with distributive property.

Happy early Birthday to Sandra Hinojosa!!

Happy early Birthday to Eli Risinger!!

Handwritten work for the equation:

$$4h + 24h - 32 = 49h + 14 + 2h$$

$$28h - 32 = 51h + 14$$

$$-28h - 32 = 23h + 14$$

$$-46 = 23h$$

$$-2 = h$$
